# RZR High Performance Air Filter

## Installation instructions

### Electrical House Bolt Replacement

This electrical component mount bolt is too long and must be removed and replace with the supplied 1/4-20 x 1-1/2 Lg bolt

**Warning!!** : If this bolt is not replaced it will hit the canister and damage it.  
Some newer model RZR's may not need this bolt to be replaced.

**Note:** The canister is not warranted against wear and tear, dents & scrapes, paint wear etc..

#### **New Crankcase Breather Filter Supplied**

**Installation:** Connect the nipple end directly to your existing breather hose with direction of the arrows on the filter away from the engine. Anchor the black short hose supplied, to the frame or use a longer hose to keep water from going into the filter if you are crossing rivers or other high water areas.

# Cyclone Ultra filter RZR High Performance Air Filter

Installed Shown Below

Note: Do not over torque the cap nut more than 8ft lbs.

This filter is a direct replacement for the stock filter.  
You will not be using the stock air intake box above the filter  
which can be closed off if preferred.  
The billet cradle racket uses the first two mounting holes on the transmission mount.
